

Global Value Dossier Content Generator

An AI agent that automates evidence synthesis and dossier creation while enforcing predefined global value dossier formats and enabling structured, multi-stakeholder content validation for payer-ready submissions.

Business Challenges

Global Value Dossier development is slow, resource-intensive, and highly dependent on manual evidence review, with content quality varying across regions and prolonged review cycles delaying payer submissions and market access timelines.

Key Capabilities

- Standardized GVD templates aligned to payer expectations with AI-driven systematic literature review automation
- Content GenAI transforming evidence into payer-ready value narratives with complete claim-to-source traceability
- Collaborative validation platform for multi-stakeholder review with version control and audit-ready governance

Business Impact

- 40–60% faster GVD content creation through standardized templates and automated evidence synthesis
- 50–70% reduction in SLR effort and timelines, accelerating evidence readiness
- 30–50% reduction in medical writing and dossier development costs
